

HAIKU OPERATING SYSTEM

“Haiku is an open source operating system currently in development designed from the ground up for personal computing. Inspired by the Be Operating System, Haiku aims to provide users of all levels with a computing experience that is simple yet powerful, and void of any unnecessary complexities.”

Haiku Quick Facts

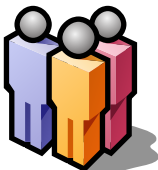

- OS focused on the desktop
- Custom kernel designed for responsiveness
- Fully threaded design for multi-processor/core
- Rich OO API allows faster development
- Database-like file system (OpenBFS)
- Unified, cohesive interface integrated
- Best defaults, not maximum configurability
